

Comparable graphs for Stockbrook St for period 1 April 2021 – 30 September 2021 and the previous reporting period 1 October 2020 – 31 March 2021

Comments from Area Housing Manager Paula Solowij

The number of garden cases picked up has slightly increased due to the growing season, it would appear though that tenants are responding well and taking action to resolve the garden issues identified as most cases are being closed within 3 months.

We have one abandoned vehicle that is over 3 months old, we are working on this case with the Public Protection Officers to bring about a conclusion.

We have seen an increase in the number of repairs that have been identified through routine inspections, the increase may be because non urgent routine repair work was put on hold during the COVID pandemic.

There has been a slight increase in fly tipping incidents on the previous period but nothing significant. This is very positive given we have not held any additional events such as compactor days to get rid of waste during this period.
